

Ball-joint

For use with 3D LED Flex 100, 40 and 25 systems, and Eucild 20 ball-joint system

Product description:

Radiant's modular 3D flexible LED linear lighting systems use an articulated ball-joint system between the heat sink modules.

The ball-joint system allows the modules to bend and twist in 3 dimensions, so that they can follow any building contours.

There are various types of ball-joint to suit different applications, which can be seen on this data sheet. Please call or email to discuss custom requirements. Below you can see the different ball-joint options used with the 3D LED Flex 40 system.

Product Code	Material	Length (mm)
BALL JOINT	Nickel-plated brass	(For long ball-joint) Standard: 100mm 200mm 300mm
BALL JOINT +2MM		
BALL JOINT LONG		
BALL JOINT BRACKET		
BALL JOINT SMALL RADII		
BALL JOINT IN LINE FIXING	Stainless steel	-any length-
